

CO₂ Kit

Tips

- Place the diffuser in an area that has good water movement. Greater flow will mean that dissolved CO₂ is moved quickly away from the diffuser allowing more to dissolve into the aquarium water.
- As this kit uses disposable cylinders, they cannot be re-filled and re-used. The disposable cylinders are made from recyclable material and therefore they should be disposed of with your household recyclables. Replacement cylinders are available from your local Aqua One dealer.
- If the diffuser becomes blocked, unscrew the cap and remove the ceramic diffuser plate. Soak the diffuser for 24 hours in vinegar and place back in the unit. If the diffuser remains blocked, replacement diffusers are available from your local Aqua One dealer.
