

FluroGrow

Trouble Shooting

LIGHT DOES NOT WORK

1. Ensure the plug is inserted correctly and the switch is in the “on” position.
2. The fluorescent tube may require replacing.
3. The fluorescent tube may not be inserted correctly. Follow the instructions in the previous section to open the unit and check the tube.
4. Remove the old tube and place them somewhere safe, where they will not roll off or be stepped on.
5. Remove the new tube from its packaging and insert it into the tomb stones as soon as it is removed from the packet and twist it to lock it back into position.
6. Place the old tube into the used pack from the new one and dispose of sensibly or mark as used and store them somewhere safe where children can not touch them.
7. Reassemble the unit in reverse order.
8. Test the light unit prior to reinstalling it. Let it run for approximately 5 minutes before switching it off. Let the unit cool before putting it back into position.
