Price & Technical Information

Code	Description	Litres
56118BK	Betta Kit BettaArc with LED Base Light 1.2L Black	1.2L
56118SV	Betta Kit BettaArc with LED Base Light 1.2L Silver	1.2L

Notes, Hints & Tips

1. Rinse tank in tap water to remove any dust.
2. Wash gravel and place in the bottom of the tank.
3. Fill with tap water to approximately 1cm from the top of the tank. Your BettaBloc capacity is 1.2L. Follow the directions on Aqua One Betta Conditioner to remove chemicals from the water.
4. Test and adjust the pH of your water with a pH test kit (*sold separately*).
5. Let the water sit for approximately 30 minutes before adding your Betta.
6. Remember, your fish only requires a small amount of food. Refer to and follow the directions on your Betta fish food packet.
7. Your Betta will live a long happy life if maintenance is carried out on a regular basis.
 - A weekly 25% water change will ensure toxins do not build up in your tank. This reduces the risk of your fish getting sick.
 - Use Betta water conditioner anytime new water is added to the tank.
 - Try to place your BettaBloc somewhere warm in your house (*not in direct sunlight*).
 - If you require any further information, consult your Aqua One specialist.
