

Magnesium Test Kit

92073

Aqua One Magnesium Test Kit ensures your marine tank is kept in optimum condition.

Magnesium is one of the most abundant elements in seawater. It plays an important role in preventing the precipitation of calcium and carbonates and therefore in keeping both of these in high enough concentrations to maximise growth of corals and other calcifying organisms.

Suitable for: Marine

Features & Benefits:

- For testing of magnesium in saltwater aquariums
- Performs up to 60 tests
- Testing accuracy $\pm 15\text{ppm}$
- Uses a combination of liquid and powder reagents

Price & Technical Information

Code	Description	Inner	Carton
92073	Test Kit Magnesium Mg QuickDrop	12	96

Notes, Hints & Tips:

- Magnesium should be maintained in a marine aquarium at levels of between 1200-1400ppm. At levels below this, growth of calcifying organisms may be reduced and calcium and carbonate levels may drop.
- Because magnesium concentrations affect the concentrations of both calcium and carbonates. The calcium and carbonate hardness of the aquarium should be tested in conjunction with the magnesium.

Warning and Disclaimers:

- Harmful if swallow
- Causes burns
- Irritating to eyes
- Very toxic to aquatic organisms
- Keep sealed and out of reach of children
- Do not breathe dust
- In case of contact with eyes, rinse immediately with plenty of water and seek medical advice
- In case of accident or if you feel unwell, seek medical advice immediately (show label where possible)
- Avoid release to the environment
